TBS WebEdition INTEGRATION WITH WATCHNET

Integration Type: Automatic synchronization of Personnel information data from TBS WebEdition to Watch*NET* Access.

Partner Product Version: WebEdition R10.4

Watch*NET* Version: Watch*NET* Access Control Software Version 1.2.2.9 & above.

1. New features and enhancements

a) To automatically synchronize user data between TBS system and Watch*NET* Access, an adapter solution is required.
b) The 'API SyncTool' was created for this purpose. It is designed as an NT service.
c) The SyncTool uses API and TBS RemoteSync web service for synchronization.
d) The Watch*NET* Access software holds the master database of users and TBS database will be synchronized to reflect master content.

2. Installation considerations

The following components are required for integration to function:

a) SQL2008\SQLEXPR_ADV.exe
b) Watch*NET* Access Control Software Version 1.2.2.9 and above.
c) TBS WebEdition R8.2 or newer.
d) API SyncTool.

TBS – Watch*NET* Access database integration:

1) User database is synchronized TBS to Watch*NET* Access database automatically.

2) Only biometric data must be enrolled using TBS software.
