

ASSA ABLOY Integrates Aperio® Wireless Technology with WatchNET Inc.

Aperio wireless locking technology from ASSA ABLOY integrates with WatchNET Access Control Software.

NEW HAVEN, Connecticut – ASSA ABLOY Opening Solutions completed the integration of their Aperio® wireless lock technology with the WatchNET Access Integrated Security solution from WatchNET Inc.

“It is our vision here at WatchNET Inc. to offer our clients more opportunities and options to their customers. With the addition of the Aperio Wireless Lock technology we have opened new doors of opportunity and integration!” said Shawn German, VP Sales & Marketing at WatchNET Inc.

The Aperio integration offers WatchNET Inc. customers an easy way to connect additional openings to their new and existing WatchNET Access installations. Aperio is a global wireless platform that works with extensive locking hardware options from ASSA ABLOY Group brands, offering the flexibility to address a variety of applications throughout any facility. The platform uses wireless communication (IEEE 802.15.4) between the lock and an Aperio hub to provide real-time communication to the access control system, simplifying installation and reducing costs.

WatchNET Access Software is a user-friendly managing software to manage credentials, set schedules and view real time events. In addition to this, users can also manage the wireless Aperio locks directly from the WatchNET software. All communication from our software to our controllers is fully secure and encrypted.

"[QUOTE FROM ASSA ABLOY]," stated Angelo Faenza, head of U.S. Digital Access Solutions, ASSA ABLOY Opening Solutions Americas.
